

Allscripts Touchworks Practice Responds Quickly to Requests for Patient Chart Information

Cedar Valley Medical Specialists, PC
Waterloo, IA

- 50+ physicians
- Multi-specialty practice

CHALLENGE

With more than 50 physicians practicing at Cedar Valley Medical Specialists, managing and sharing patient health records is paramount. And when requests come into the front office to export a single patient chart or a group of patient charts, staff members would have to dedicate several hours to completing the task. They were in need of an affordable solution that could plug directly into their existing electronic health record (EHR) system and enable them to securely share chart information in a PDF format.

“When a long-standing Cardiologist left our practice, we needed a way to manage his complex patient charts to go with him. Chart2PDF allowed us to quickly select and manage a large group of patients and batch produce charts without a performance impact. The product has been a remarkable time and money saving investment for our practice!”

Lynne Brayton, EHR Analyst / Health Information Technology

RESULTS ACHIEVED WITH CHART2PDF

Quick install of solution that is compatible with existing Allscripts Touchworks EHR

Able to quickly create a batch of PDF charts without impacting system performance

Reduced labor time and turned a tedious task into a quick and secure process

Improved patient and physician satisfaction with rapid response to chart requests
