

EHR Integration Services (EHRis) Joins Allscripts Developer Program With Certified Solutions Designed for Enhanced Care Coordination

Skaneateles, NY, March 12, 2015 – [EHR Integration Services](#) (EHRis), a leading healthcare data management service company, today announced that its [EHRQIS \(Quality Information System\)](#), [Chart2PDF](#) and [e-Filer](#) solutions have all been certified for Allscripts TouchWorks® EHR through the [Allscripts Developer Program](#) (ADP). EHRis' mission is to improve care delivery and bottom line results through "Perfect Practice," the company's proven consulting approach to data integration solutions.

Certifying these three solutions marks a collaboration between EHR Integration Services and Allscripts to provide innovative, integrated health IT solutions that support high quality and cost-effective care. EHRis' solutions enable a broad range of device and application integrations to electronically store information in the patient record.

The certified solutions include:

EHRQIS (Quality Information System)

- Provides physicians with immediate feedback on patient quality performance measures;
- Acknowledges quality metrics that are outdated or not in compliance;
- Relies on EHRQIS traffic signal icon and dashboard report to quickly highlight a patient's needs to ensure quality care delivery;
- Provides complementary reports for all measures configured to enable easy review of essential data on the patient, provider and organization level.

Chart2PDF

- Mitigates staff resource constraints by eliminating the need to print, scan and burn CDs one chart at a time;
- Enables users to respond quickly and accurately to large insurance and legal audits;
- Improves customer service through instant delivery of patient chart requests;
- Reduces printing and labor costs through automated production of an electronic patient chart.

e-Filer

- Increases productivity through reduced scanning department backlogs and wait times;
- Reduces clinical errors through direct import of data into the patient chart;
- Improves patient care by providing the physician with immediate visibility to a patient's clinical and administrative documents;
- Provides a great return on investment through full integration with TouchWorks EHR.

With the integration into TouchWorks EHR, clients can leverage the benefits of these productivity-enhancing applications to customize quality measures tracking for each provider's patient population and instantly output a patient's chart individually or in a batch file for printing, storage or electronic transfer. Clients also will have the ability to import any patient's electronic document type directly into their chart.

"These products have been providing value to TouchWorks clients for some time now, but significant enhancements have been made to them recently in order to meet ADP certification requirements," remarked

Craig Luce, President of EHR Integration Services. “Allscripts clients benefit by knowing our products are in a trusted and certified connected environment designed to improve efficiency and enhance the quality of care. This fits right in with our “Perfect Practice” consulting process and service philosophy - providing the perfect data integration solution for each of our valued clients.”

“Allscripts has had open API’s since 2007. We created the Allscripts Developer Program to speed time from innovation to implementation for our clients,” said Stanley Crane, Chief Innovation Officer and General Manager, Open Business Unit, Allscripts. “We’re excited to expand our relationship with **EHR Integration Services** through the Allscripts Developer Program. EHRis continues to improve on an already solid platform of add-on applications for our clients.”

Interested parties can find more information about EHRQIS (Quality Information System), Chart2PDF and e-Filer on the [Allscripts Application Store](#). Allscripts TouchWorks EHR users are invited to learn more about these applications on two free webinars: [ADP First Look for TouchWorks EHR webinar on March 17 at 2:00 PM ET](#) and on an [EHRis-hosted webinar on April 16, 2015 at 2:00 PM ET](#).

About EHR Integration Services

Founded in 2006 by President Craig Luce, EHR Integration Services (EHRis) consists of a team of skilled specialists who leverage their knowledge and experience in Healthcare IT to transform complex data integration issues into clinical and operational workflow improvements required to manage today’s electronic medical practice. Headquartered in Skaneateles, New York, the EHRis mission is to improve care delivery and bottom line results through “Perfect Practice,” the company’s proven consulting process and service philosophy that provides the perfect approach to data integration solutions. The company is a Certified Developer Partner for Allscripts. For more information about the company, visit www.ehr-integration.com.
