QIS Release Notes

VERSION: QIS v3.0   **RELEASE DATE:**   January 12, 2015

UPDATE: QIS/Unity Integration

-   QIS is now fully integrated with Allscripts Unity and a certified product with the Allscripts Development Partner Open platform.

UPDATE: Scorecard (Beta) Retired

-   The Scorecard (Beta) report has been removed from QIS.

UPDATE: Problem Report Retired

-   The Problem Report has been removed from QIS. This report let you run a report for all measures assigned to the selected provider.   This can be recreated by running each separate Measure Group report for the given provider.

UPDATE: Location Dictionary and Functionality Retired

-   The Location dictionary and location field has been removed from QIS. When results or orders are entered via QIS the location field will not be included and will be blank in TWEHR.

UPDATE: Report Build/MSSRS Importer Retired

-   Report Admin has been removed from QIS. This allowed groups to rename reports and import their own reports...

UPDATE: Social Hx Problems in TWEHR can trigger a Measure Group

-   To help with Smoking Cessation, and other Measures, a Measure Group can now be triggered by a TWEHR Social hx problem.

UPDATE: Problems Linked to Measure Groups can be ICD9/ICD10 Based or No Code Associated

-   Measure Groups (formally known as QIS Problems) are linked to TWEHR Problem. The TWEHR Problem does not need to always have an ICD9 code linked. TWEHR Problems can be triggered based off of ICD10 as well as ICD9 codes or TWEHR Problems with no codes attached can drive a Measure Group.

UPDATE: Measures are Flagged Yellow if Expiration Date is "Coming up"

-   Measures (formally known as QIS Metrics) will now have a yellow flag on them if the Measure's expiration date is near or "Coming up". A system background setting will drive the number of days prior to the expiration date that the Measure will turn Yellow.
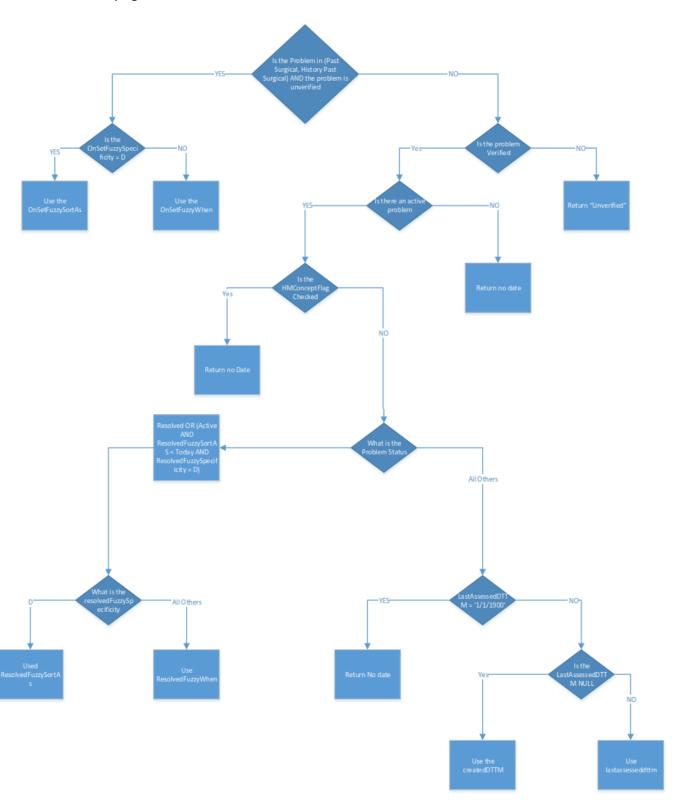

UPDATE: System Level Control of Traffic Signal Color Coding

-   A system background settings allows clients to determine the number of Measures that are expired to trigger the yellow and red Traffic Signal Color coding.

UPDATE: Result Date determination for Measure Satisfied by a TWEHR Problem

- Allscripts Unity uses the following logic to determine the date associated with a TWEHR Problem which is then used when satisfying a QIS Measure:
