

Physician Group Practice Proactively Monitors Quality Metrics for Large Physician Database

Arizona Community Physicians
Pima County, AZ

- Largest physician owned medical practice in the state of Arizona
- Primary care medical group practice
- 130 physicians and 35 Physician Assistants and Nurse Practitioners
- Serving patients in 56 office locations

CHALLENGE

With more than 130 physicians practicing at Arizona Community Physicians, reporting on quality metrics and managing these metrics day-to-day was a time consuming task. And in order to attest for the Meaningful Use program, eligible providers needed to easily report on their performance real-time. EHRQIS, which fully integrates with their existing electronic health record (EHR) system, Allscripts TouchWorks®, was installed to make the managing of the individual physician metrics and the overall community metrics easy to view and promote action when appropriate.

"EHR Integration Services has done a great job with QIS creating an analytics product that is intuitive, fast, effective and powerful. It works seamlessly with Allscripts TouchWorks."

Ken Adler, MD, President

RESULTS ACHIEVED WITH EHRQIS

Quick install of solution that is compatible with existing Allscripts TouchWorks EHR

Receive immediate feedback on patient quality performance measures with minimal clicks

Color-coded design enables quick triage on what patients need right away to ensure quality care

Improved physician compliance and supported quality measure tracking for meaningful use
