

## INTERFACE SERVICES

# Combining Interface Development with Workflow Improvement.

“Our internal IT staff does a great job with interfaces and data mapping, but EHR Integration Services provides highly skilled developers with a deep understanding of combined data sets and a focus on workflow improvements. The EHR team has provided Holzer with complex interface solutions that have removed long-standing data sharing roadblocks between systems. As a result of our relationship, we’re sharing discrete data across multiple IT systems leading to highly efficient and paperless workflows!”

SCOTT MASH

Manager of Clinical

& Ancillary Applications,

Holzer Health System, Gallipolis, Ohio

Our Perfect Practice philosophy carries through to our interface development approach. We don’t simply build a pipeline to connect with disparate healthcare information systems. *Instead, we evaluate and solve your interface needs with a focus on optimal data capture and placement of mission-critical elements.*

### Problems We Solve

- » Ambulatory EHR interface development/maintenance
- » Practice management interface development/maintenance
- » Custom interface development and data mapping
- » Interface development training and/or outsourcing

### Our Approach

*We approach interfaces with two distinctive philosophies:*

#### 1. EVERYDAY INTERFACES: It’s Already Been Done.

Chances are we already have the interface you are looking for. We have developed interfaces to/from numerous Labs, EHR, PM systems and third-party vendors. Our consultants regularly train clients on ConnectR (Data Connect) interface development skills and have extensive HL7 expertise.

If you are an Allscripts Enterprise EHR and/or GE Centricity Group Management/RIS-IC client—we’ve got your interface needs covered.

**Contact us at  
315-707-7843 to learn more.**

STANDARD INTERFACE MATRIX						
Interface Elements	Ambulatory EHR		Practice Management		GE Centricity Radiology	
	Inbound	Outbound	Inbound	Outbound	Inbound	Outbound
ADT	●					●
Charges		●	●	●		●
Immunizations	●	●				
Orders	●	●				●
Payments			●			
Registration	●		●	●		●
Results	●				●	●
Scheduling	●			●		
Transcription Doc's	●	●				

*EHR Integration Services* will evaluate your interface needs with a focus on optimal data capture and placement of mission-critical elements.

**2. THE INNOVATION LAB:**

**If It Hasn't Already Been Done—We'll Do It!**

When a standard interface just isn't enough, we dig deep into understanding your unique messaging and workflow needs. In our Perfect Practice Innovation Lab, we work hard to develop an elegant integration solution.

Our team's "outside-the-box" thinking utilizes interface engines in ways you may not have ever imagined, such as: PDF Filing; Rule-Based Charge Submissions; Custom Tasking Workflow; Medical Device Integration.

Contact our team to schedule a product demonstration.

**Health Information Exchange (HIE) and Hospital EHR Integration**

Need a solution for integrating in- and out- patient data, ensuring the continuity of patient care, and providing better decision support at the point of care for RHIO, HIM and enterprise HIE initiatives?

We've already addressed these complex challenges in our HIE implementations. We can help you consider the technology options, develop a plan and implement a solution.

**What It Means To You**

- » **Increased Productivity**— Reduce or eliminate: paperwork, extra clicks, manual data entry, scanning, and extra foot-steps.
- » **Reduced Clinical Errors**— Eliminate manual entry of significant clinical information and test results.
- » **Improved Patient Care**— More timely access to diagnostic and treatment plan information.
- » **Peace Of Mind**— We've seen this all before and can take the stress and frustration out of interface development.
- » **Return On Investment**— Increased productivity + reduced errors + improved patient care + peace of mind = ROI.
