

Are you looking for a more efficient way to manage required ACOG prenatal forms within your patient charts?

Experience the many clinical and workflow benefits of EHR Prenatal.

Improve patient safety by eliminating data entry errors and simplifying the data recording process.

- **Efficient Data Collection and Reporting:** EHR Prenatal works with your EHR application to simplify problem lists so a provider can focus on prenatal care.
- **Improved Patient Safety:** Automated data entry eliminates the possibility of user data entry error.
- **Problem List Flexibility:** Enables the flexibility to hide non-prenatal elements from the problem list and add any unique problems that might improve provider/patient interactions.
- **Field-level Contention Resolution:** Allows two users to save changed data fields every 15 seconds, even if another user is working in the same patient's record at the same time.

Designed by a committee of OB/GYNs with prenatal care best practices and efficiency in mind, EHR Prenatal is a digital ACOG antepartum add-on application for your EHR application.

One of the best-known and most widely used standardized prenatal records in the OB/GYN community is the American College of Obstetricians and Gynecologists' prenatal record, or ACOG Antepartum Record. How well ACOG forms are integrated into a provider's EHR determines the extent to which the provider's task of completing the ACOG is easy, accurate and helpful in the delivery of good prenatal care.
